

## ORGANIC WORM CAST BRICKS

A slow release, high microbial colony forming, biological fertiliser in a 1.25kg compressed brick form.

These bricks have been cleverly designed to be broken in half for greater control on usage.

Worm casting bricks are perfect for new plantings of citrus, avocado, and almond trees, and any tree which can aid from accessing a steady nutrient source to help turbo boost the root structure of the plant. Trees planted with worm casting bricks grow faster and stronger and this will help to get plants into commercial production.

AVAILABLE FOR DELIVERY ACROSS AUSTRALIA
