

# ORGANIC WORM CAST PELLETS

Organic Worm Cast Pellets are a biological fertiliser made from worm casts that contain beneficial soil microorganisms.

Worm casting pellets are 5mm in diameter to suit a range of agricultural users including broad acre, horticulture, viticulture and the home garden market. Full of beneficial soil micro-organisms including bacteria, fungi, protozoa and nematodes (the good guys!), worm casting pellets help transform nutrients within the soil from inorganic forms to organic forms to aid in plant nutrient uptake.

- **Maximise nutrient availability**
- **Improve soil structure**
- **Increase yield & quality**
- **Disease suppression**
- **Contain Humic Acid**

Available in as little as a 4ltr tub up to 20kg bags, 500kg and 1Tn bulka bags to bulk orders.

AVAILABLE FOR DELIVERY ACROSS AUSTRALIA
