

BIOWEED®

Bioweed is a herbicide made from natural and sustainably sourced hand tapped pine oil, certified organic Input* and glyphosate free.

All of our products are naturally produced and are safe for use around your family, garden, pets or business.

Best of all, our products are Australian owned, made and backed by over 20 years research and development.

Bioweed weed control and Garden Probiotics are developed by Sustainable Formulations Group, which is Australian owned and made on the Sunshine Coast, Queensland.

To produce Bioweed we have sourced premium pure active ingredients from sustainable farmed pine trees from around the world. And worked on the current formulation for over 20 years to gain the best naturally based weed and seed killing formulation on the market.

Bioweed is approved by NASAA, ACO and APVMA for use around organic farms and organic food production.

Bioweed Commercial 100L Concentrate

\$2,180.00 Including GST

Bioweed Commercial 1000L Concentrate

\$21.50 per litre Including GST

(Mix1:9 with water)

FAQ's

*This product is allowable for use on farms certified to the Australian Certified Organic Standard

- Dependant on the storage of Bioweed, it is registered to have a shelf life of 2 years.
- Bioweed is completely safe for dogs. As there is no withholding period, dogs can be in the yard when spraying. Best practice is to keep dogs off the treated area until dry to give the weed killer maximum time of the leaf surface.
- Bioweed is a non-systemic natural herbicide that will not effect bee and insect populations when used as per directions (i.e do not directly spray on to insects or bees). As Bioweed is non residual, it means that within 72hrs the herbicide component of the spray will be broken down in to long chain carbon and be beneficial to the soil.
- Mixing rates can be found on the label but as a general guide the mixing rate is between 10% and 20%. The bigger the weed the stronger mix you will need.

Features

- Visible symptoms on some weed species after 1 hour
- Organic certification – Organic input and approved for organic gardening
- Controls a wide range of common weeds and grasses
- Non residual so it will break down in the soil within 72hrs
- Kills both weeds and their seeds
